LINED CATCHMENT FIELD WALK

4.00pm Wednesday 2 September 2026

24 Pohler Road, Flaxman Valley (*enter at double gates against driveway*)

Over the last 12 months, the Barossa Improved Grazing Group has conducted a project to demonstrate the construction of a lined catchment. A first of its kind in the region, this 1-ha poly-lined catchment captures runoff that flows into an existing dam. Hear from landholder, **Leon Deans** about why it was built, the requirements for building one and the steps involved in its construction. Also on hand will be local SARDI soils consultant, **Brian Hughes** who will share insights on lined catchments that have been constructed on the Eyre Peninsula.

The field walk will be followed by a free BBQ tea at the nearby
Mt McKenzie Hall – 13 Yumbunga Road, Mount McKenzie
